ARE YOU READY FOR ISO 50001? – THE NEW ENERGY MANAGEMENT STANDARD

THE NEWLY LAUNCHED STANDARD OF ISO 50001

Prices of energy remain at a very high level all over the world, which leads to the rising of costs of production for companies. At the same time, low energy efficiency brings not only more difficulties to the enterprises for their survival, but also an enormous ecological damage for human existence. Therefore, it becomes an urgent case for us to reinforce energy management, and to improve the level of energy efficiency.

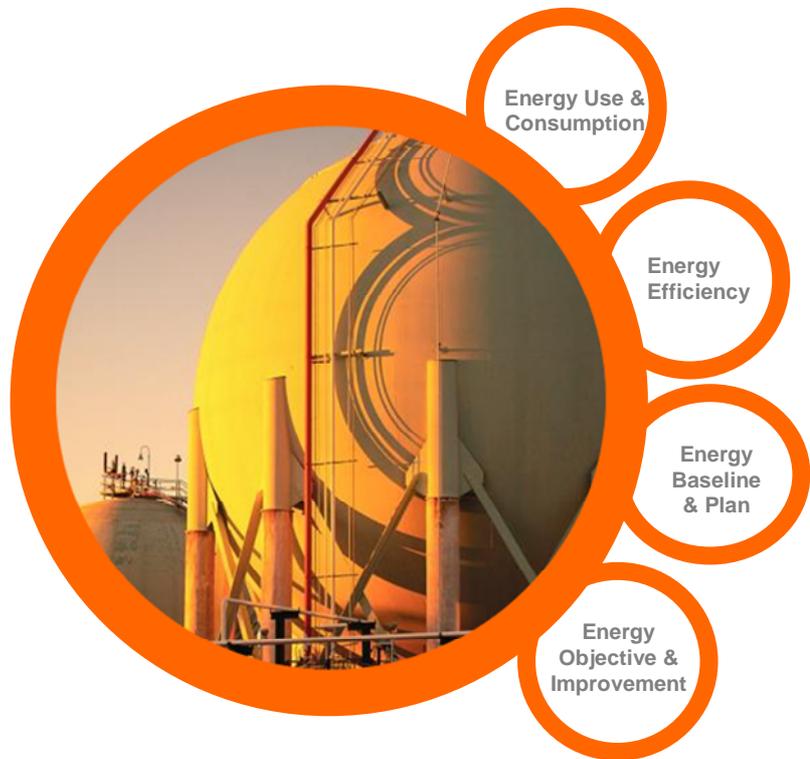

To further align with other energy management standards and to gain global recognition, ISO (International Organization for Standardization) has officially launched the **50001** standard, **Energy Management System – Requirements with guidance for use** on 15th June, 2011.

This new energy standard which aims to provide the best practice in energy framework that enables all type of organizations to develop and implement a policy, identify significant energy uses and target for energy improvement on efficiency.

Furthermore, the **ISO 50001** follows the same characteristics with other ISO management models which enable organizations to implement individually or integrate to tailor fit with other management system standards such as ISO 9001 (quality management), ISO 14001 (environmental management), ISO 22000 (food safety), ISO / IEC 27001 (information security) for the overall improvement.

As SGS, we understand the needs of global sustainable solutions for environmental protection, thus we dedicate in providing various training courses & the certification services for all range of organizations, in both public and private sectors, in manufacturing and services.

Should you have any enquiry regarding Energy Management System, please kindly contact us for more information.
